ResQMe tested by Auto Plus.

LE PRODUIT > Porte-clés de sécurité ResQMe

À QUOI ÇA SERT?
Couper les ceintures et briser les vitres en cas d'accident

LE TEST

■ Brise-vitres:	bon
■ Découpage ceinture:	très bon
■ Poids:	17,8 g
■ Prix:	élevé

Les étoiles
★★★★☆

L'attache du porte-clés se "déclipse" et laisse apparaître une lame pour découper la ceinture très facilement. Un système de poinçon à ressort permet aussi de briser une vitre latérale. Il suffit d'y appuyer l'extrémité noire du ResQMe. Une pointe vient alors frapper le verre et amorcer la cassure. On finit avec un objet quelconque, ou avec la main en se protégeant.

In their last release #937 (August 22nd, 2006), the weekly French automobile magazine, Auto Plus, put ResQMe to the test.

Every year, the Auto Plus magazine picks new auto related products and accessories and evaluates their performance. The tests are intended to determine the quality, effectiveness and affordability of each product, asking the question "does this product do the job?"

The verdict of their laboratory test was quite notable. Rated with 4 out of 5 stars, ResQMe performed extremely well, breaking car side windows and cutting seat belts.

Once again, ResQMe has proven itself as a high quality safety product. Invented and manufactured in the USA, this innovative product is an essential tool for any driver facing car entrapment. ResQMe breaks side windows and slices through jammed safety belts using a carefully concealed razor-sharp blade. Accompanying car keys, ResQMe can be taken anywhere, allowing drivers' peace of mind.

More than just a tool, ResQMe is an important part of the effort to reduce road fatalities.
