

**C**ar accidents can happen and we all are subject to the unexpected situations. Today many Governments in the world have enforced some safety prevention by implementing safety triangle and safety vest to all the vehicles on the road as mandatory equipments; and even in the Netherlands, the Dutch minister of transportation recently announced his intention to enforce all the new 2009 models to carry a handheld rescue tool nationwide.

As most vehicles are becoming electronically controlled, more and more drivers are realizing that the danger of entrapment is in fact, a real concern. Inspired by the traditional car emergency hammer, we, at nov8, have introduced ResQMe™, the 2 in 1 keychain rescue tool: this patented small powerful device comes with a center punch to break a side window, with a sharp protected blade to cut through seat belts. ResQMe™ can help provide peace of mind on the road!

Keep ResQMe™ on your keys and be prepared!

**ResQMe™** for the  
*Ultimate Safe Drive!*
